DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

As to claim 1 and 9, while both are structured as though to claim a method of measurement, they proceed to claim an apparatus that does not further limit the method.

With further regard to claim 9, the relationship between method steps and means for executing said steps is unclear. The claim includes confusing alternative language and confusing verb and article structures.

As to claims 2-8 and 10, while structured as method claims, proceed to further limit an apparatus that does not further limit the method.

As such, the following rejection is based on the claims as understood by the examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2877

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 and 10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by U.S. Patent No. 5,680,489 to Kersey.

As to claim 1, Kersey discloses a method of measurement using a fiber Bragg grating wavelength interrogation apparatus, being able to measure the reflected or transmitted Bragg wavelengths from an FBG sensor (see columns 9-12).

The limitation of “orthogonally polarized Bragg wavelengths of one or more several birefringent Bragg grating sensors” is considered to be preamble and not a limitation of the method of measurements.

As to claims 2-8 and 10, as explained above, they are further limitations on an apparatus and are not considered to further limit the method of claim 1.
